

WHERE TO APPLY

Isolate units are extremely versatile, and may be used in either portable or fixed location installations. Units generally are directly located in the room served, but the ISO™-UVC/HEPA and CHEM machines are also able to be installed above a suspended ceiling grid. In-duct units are furnished with 12” diameter inlet and outlet duct collars, include self-supporting members, and are quick and easy to install. Simple 120 volt power junction box wiring is provided.

Portable units are equipped with casters and a 120 volt hospital grade electrical cord and wall plug. Built-in units all come with duct connections or flanges and must be hard wired by a licensed electrician to local codes and standards.

The following facility installations could likely benefit from the high efficiency filtered air produced by the Isolate Series units.

- Hospitals and Clinics
- Emergency Rooms
- Correctional Facilities / Prisons
- Nursing Homes
- Dental Offices
- Animal Labs
- Food Processing / Packaging Plants
- Manufacturing Facilities
- Grinding Operations
- Smoking Lounges
- Patient Isolation Rooms
- Waiting / Treatment Rooms
- Laboratories
- Pharmacies
- Dental Labs
- “Safe Haven” Environments
- Clean Rooms
- Office Environments
- Casinos
- Anywhere Clean Air is Needed
